Determination of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDCP).

The BDCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP prosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 1sogenic strain y2; cn bw sp, the same strain used for the BDGP's pland BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Library construction is described in Ivens et al., Genomics Research, 8:135-145 (1998). The cLHYG vector (Acc. No. CVU59231) is described in Ryan et al., Gene, 131:145-150 (1993).

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Libogenic strain y2: cn bw sp. the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Lubrited (02-JUN-1999) Genoscope - Centre National de Sequencage : Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr Determination of this BAC-ed sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutovyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI dicestion of Drosophila DNA provided by the BDGP from the isogenic strain v2. nbw sp. the same strain used for the BDGP's pland EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNW was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          943
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GGTGGGGGGTCACCCACCGTTCATATCGGGCCTACCGCCTTCCTCGGCTTGGGTGTTGTC 156

/note="Yector: pCMVSPORT_6" ist strand cDNA was primed
/note="Yector: pCMVSPORT_6" ist strand cDNA was primed
with a NotI-oliq(dT) primer. Five prime end enriched,
double-strand cDNA was digested with Not I and cloned into
the Not I and ECORV sites of the pCMVSPORT 6 vector.

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.

CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg. qtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon.

If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                Direct Submission

Floogation factor g, similar to eg. EFG_ECOLI P02996
elongation factor g (ef-g). Escherichia coli (703 aa),
fasta scores; opt:1049 z score: 1105.5 E(): 0, 32.5%
identity in 717 aa overlap. Contains PS00017
ATP/GTP-binding site motif A (P-loop).Also similar to M.
tuberculosis fusA, MTCY210.01 (39.1% identity in 299 aa
overlap). Similar to spiP30767 EFG MYCLE ELONGATION FACTOR
G (EF-G). (701 aa); 31.7% identity in 710 aa overlap."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
                                                                                                                                                                                                                                                                                                                                                                                                   /Jocus_tag="Mub0001"
//Jocus_tag="Mub0001, dnaA, len: 507 aa. Equivalent to Rv0001, len: 507 aa, from Mycobacterium tuberculosis strain H37Rv, 199.6% identity in 507 aa overlap). dnaA, chromosomal replication initiator protein (see citations below), equivalent to other Mycobacterial CHROMOSOMAL REPLICATION INTIATOR PROTEINS e.g. P64388 DNAA_MYCLE from Mycobacterium leprae (502 aa); 09L7L7|DNAA_MYCRA from Mycobacterium paratuberculosis (509 aa); P49992|DNAA_MYCRA from Mycobacterium sneamatis (504 aa); etc. Also highly similar to others except in N-terminus e.g. 092H75|DNAA_SYRCH CHROMOSOMAL REPLICATION INTIATOR PROTEIN from Streptomyces ofbrysomallus (624 aa); 092H76|DNAA_STRRE from Streptomyces ofbrysomallus (624 aa); DNAA_ECOLI|P03004|B3702 chromosomal replication initiator protein from Escherichia coli strain K12 (467 aa); PASTA scores: opt: 986, E(): 0, (43.2% identity in 389 aa overlap); etc. Contains PS00017 ATP/CTP-binding site motif A (P-loop) and PS01008 DnaA protein signature. BELONGS TO THE DNAA FAMILY. Note that the first base of this gene has been taken as base 1 of /codon_start=1 lable-11
//codon_start=1 lable-11

Sequence 1, Application US/09223040

Patent No. 6544522

GENERAL INFORMATION:

APPLICANT: Skeiky, Yasir

APPLICANT: Alderson, Mark

APPLICANT: Campos-Neto, Antonio

APPLICANT: Corixa Corporation

ITILE OF INVENTION: Fusion Proteins of Mycobacterium tuberculosis Antigens

TILE OF INVENTION: and Their Uses

FILE REFERENCE: 014058-009010US

CURRENT APPLICATION NUMBER: US/09/223,040

CURRENT FILING DATE: 1998-12-30

NUMBER OF SEQ ID NOS: 10

Patent NO. 6294328
GENERAL INFORMATION:
APPLICANT: FLEISCHMAN, Robert D.
APPLICANT: PRASER, Clair e M.
APPLICANT: WHITE, Owen R.
APPLICANT: WINTER, John C.
TITLE OF INVENTION: DNA, SEQUENCES FOR STRAIN ANALYSIS IN MYCOBACTERIUM
TITLE OF INVENTION: 1998-06-24
CURRENT APPLICATION NUMBER: US/09/103,840A
CURRENT FILING DATE: 1998-06-24
NUMBER OF SEQ ID NOS: 2.
                                                     40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    40

```
fusion polypeptide, comprising a polynucleotide sequence of Ral2, a 14 Mycobacterium tuberculosis, and a heterologous polynucleotide sequence. The recombinant fusion nucleic acids and polypeptides are useful for providing stable and high yield expression of fusion polypeptides of both eukaryotic and prokaryotic origin and to encode a protein product for use as an antigen for detecting serum antibodies. The presence of serum antibodies to M. tuberculosis antigens in an individual indicates that the individual is infected with it. The fusion polypeptides are useful as sources of proteins for monitoring binding of serum antibodies to be useful as sources of proteins for monitoring binding of serum antibodies to fusion proteins and as an immunogen to induce and/or enhance immune responses. The cooling sequence can be ligated with a coding sequence of another molecule such as M. tuberculosis antigens, a cytokine or an adjuvant and can be used in vivo as a DNA vaccine. This polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          81 IleThrAlaValAspGlyAlaProIleAsnSerAlaThrAlaMetAlaAspAlaLeuAsn 100
